Bio-Qunol (Ubiquinol Plus)

150mg

Bio-Qunol - The Advanced Ubiquinol Supplement for Optimal Health!

Bio-Qunol is the latest formulation from the Annatto Product Line by Dr. Barrie Tan, the leading scientist and researcher. This advanced supplement contains the natural, active form of CoQ10, known as Ubiquinol, and is enriched with annatto-derived Geranylgeraniol (GG) and Vitamin C. Bio-Qunol is the first bioavailable CoQ10 supplement that contains both ubiquinol and geranylgeraniol (GG), making it a powerful health supplement. Ubiquinol is the only fat-soluble antioxidant form of CoQ10, naturally produced in humans, which helps in generation of cellular energy currency, ATP (adenosine triphosphate). Supplementation with Bio-Qunol replenishes CoQ10, which gradually declines as we age. While the vitamin C component offers improved absorption of CoQ10.

Bio-Qunol: A Must-Have Supplement for Statin-Drug Users

Ubiquinol, which is the active and most easily absorbed form of coenzyme Q10 (CoQ10), offers innumerable therapeutic benefits to users of statin drugs. Most statin drug users are unaware that while these drugs effectively reduce the blood cholesterol level, in doing so, they unintentionally reduce the CoQ10 production. Adding Bio-Qunol supplementation to the diet may effectively offset the potential CoQ10 depletion caused by statin drugs. Furthermore, the optimum CoQ10 levels improve energy and muscle function as well as support heart health. Some studies have also shown that ubiquinol supplementation can help reduce muscle pain and weakness, which are common side effects of statin use.

What is Geranylgeraniol?

GG is defined as the “substance of life” vital for a body’s healthy metabolism. Geranylgeraniol (GG) is an endogenous compound generated in the human body through the mevalonate biochemical pathway that helps make cholesterol, vitamin K2, steroid hormones, and ubiquinone (CoQ10). GG is an essential building block for protein synthesis and the production of progesterone, testosterone, CoQ10, and vitamin MK4 (a form of vitamin K2). Production of GG declines as humans age which is why its supplementation is necessary. It can help maintain the body’s energy levels, physiological functions, keep structural support for the body and reduce the risk of age-related decline.

What is Ubiquinol?

Ubiquinol is a powerful antioxidant responsible for energy production and maintaining metabolic activities. Ubiquinol is the only fat-soluble antioxidant naturally produced in humans. It is the most active form of CoQ10 with better absorption and bioavailability.

Therapeutic Roles of Bio-Qunol

Importance of Ubiquinol

The active component of Bio-Qunol is a reduced form of Coenzyme Q10, i.e., ubiquinol, which is a powerful antioxidant. Ubiquinol protects the cells from oxidative stress and is an electron carrier in the respiratory chain responsible for the body's energy production. Ubiquinol helps improve heart function and protects it from lipid peroxidation.

Enhanced Cellular Absorption

Bio-Qunol has a unique built-in absorption advantage. The Geranylgeraniol (GG) molecule is produced via the same metabolic machinery that produces cellular energy and is an actual building block of CoQ10.

Activates Natural CoQ10 Production

One of the main attributes that sets Bio-Qunol apart is its ability to encourage the body's inherent CoQ10 production via the Geranylgeraniol (GG) molecule.

Supports Muscle Function & Strength

GG is not only a building block for CoQ10 but is also essential in the production of proteins that the body uses to build and maintain skeletal muscle.

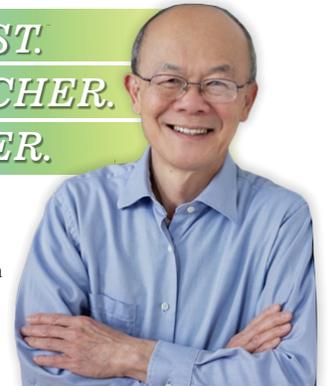

A building block for healthy aging and a groundbreaking Statin Companion

The Founder

Dr. Barrie Tan - The World's Foremost Expert on Vitamin E

Dr. Barrie Tan, the world's leading scientist and expert on Vitamin E, has researched Annatto-sourced nutrients for more than 30 years. His passion led him to discover tocotrienols and geranylgeraniol from the wonder plant of the Amazon, the Annatto plant. He not only discovered the source but also developed an affordable and eco-friendly technique to extract the Tocotrienols and Geranylgeraniol from the Annatto plant without using harsh or synthetic chemicals, petrochemicals, or solvents.

SCIENTIST.
RESEARCHER.
EXPLORER.

Who should take Bio-Qunol?

We recommend Bio-Qunol to adults above the age of 40 or to individuals who need cardiovascular support or are on statin therapy. Take one softgel daily with a meal.

We recommend you consult your health practitioner before starting any new supplements, especially if you are pregnant, lactating, or on any prescription medications.

More about Wellness Extract

Wellness Extract (WE) is a Canadian healthcare and family-owned company founded to make premium health supplements accessible to everyone, locally and globally. We strive to create a breakthrough in the health and wellness industry by creating a complete range of affordable, innovative, and science-based health supplements.

Our Mission

We aim to empower people to take charge of their health and well-being in order to live their best lives.

Our Values

Innovation. Dedication. Care.
